### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The claims are drawn to a method of preparing a sample having a DNA fragment of greater than 200 kilobases for PFGE. The method requires the cells in the sample are lysed, deproteinated and digested prior to loading on the electrophoresis gel. The point of novelty is that the sample is lysed, deproteinated and digested prior to being transferred into the electrophoresis gel. The art teaches the sample for PFGE is prepared by encapsulating the cells in a low melting agarose. Once encapsulated the cells are then subjected to lysis, deproteinization and digestion by allowing the enzymes to diffuse into the gel where the cells are encapsulated. The encapsulation is a means of preventing the shearing of the DNA. The closest prior art is Biavati et al. which discloses the standard method of sample preparation for PFGE. It is unexpected that the sample could be prepared in a liquid medium (i.e. not encapsulated in low melting agarose) without the occurrence of DNA shearing as the art teaches. The claims are therefore novel and unobvious over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
